

Where is it used?

As we mentioned, Kotlin is general-purpose programming language. That means that Kotlin can be used for many different needs like:

Server-side development, here is the list of some web framework that you can try for web development:

Kara, <http://karaframework.com>

Wasabi, <https://github.com/hhariri/wasabi>

Yested, <http://www.yested.net>

Hexagon, <https://github.com/jaguililla/hexagon>

and many others.

Android mobile development, you can develop native Android applications from Kotlin.
